Table 1. SALT Conditions Across European Training Models

Region	Countries	Training Model	SALT Exposure
North (D-A-CH)	Germany, Austria, Switzerland	Dual vocational system (80% workplace)	High-dosage, structured, repeated
East	Poland, Romania, Croatia	Project-driven, outsourcing-centred	Intense but potentially uneven
South	Italy, Spain, Portugal	Informal SME learning, some formal VET	Occurring but unrecognised
West	UK, France	Digital platforms, CPD modules	Steady but fragmented
Nordics	Denmark, Sweden, Norway	Lifelong learning, validation systems	Moderate, recognition-oriented

SALT Implication
Strongest SALT conditions: sustained immersion in real tasks
Rapid tacit script building, risk of cognitive overload
SALT likely active but unsupported by organisations
Short modules limit deep subconscious learning
Best at certifying SALT outputs, not generating them

Description
Ability to apply rules consistently
Speed and accuracy of numerical operations
Ability to translate and apply formulas
Skill at combining data across tables
Ability to spot regularities in data
Capacity for holding information while processing
Applied judgement in commercial contexts
Responsiveness to changing data patterns
Willingness to make uncertain decisions
Ability to identify logical or rule errors
Speed of trait improvement per exposure
Shift from step-by-step to pattern-based processing
Ability to apply learned patterns to new tasks
Weekly state affecting processing capacity
Weekly state affecting risk-taking behaviour
Weekly state reflecting cognitive saturation
Probability of random execution errors
Tendency for numerical imprecision
