

Project Homestead

Feasibility of Civilian Life and Enterprise in the Pokemon World

A Strategy and Business Analysis report

Not a Trainer. A normal person, common Pokemon as pets, and a small business.

The question, broken into three parts

If an ordinary person moved into the Pokemon world today, where should they live and what should they do.

Where to live

Nine regions judged on safety, cost, climate, pets, and culture. Present day, old crises resolved.

What pets cost

Common Pokemon kept as pets. Supernatural creatures matched to a person's lifestyle, not just cats and dogs.

What business

Two tracks. A general consumer business and a Pokemon related one. Kept at category level.

One Pokedollar is treated as one Japanese yen, which the original Japanese releases show directly.

Culture is two things, not one

Battle culture and rural culture are different. A region can be heavy on one and light on the other, so each is scored on its own axis.

- Alola is battle heavy (kahuna ceremonies, island trials) but its community warmth is the highest on the list. It fits a civilian anyway.
- Kanto scores fine on battle pressure but thin on rural warmth. Familiar, not rooted.
- Kalos is strong on both, so the two cancel out to middling.
- Johto has strong rural warmth and a battle culture that never takes over.

Culture read on two axes, not one

Johto wins on the weighted score

Regional weighted score, all nine core regions

The top four

1. Johto 7.36

Safe, mid cost, warm rural culture, calm on battling.

2. Paldea 7.04

Open field, low battle pressure, held back only by being new.

3. Alola 6.84

Warmest culture on the list, offset by cost and a rare wormhole risk.

4. Kanto 6.82

Familiar and safe, but thin rural culture drops it once culture is scored right.

How the money figures were built

- Games do not vary price by region, so costs are modelled, not lifted.
- Base is a basket of canon item prices, shown in yen in the Japanese releases.
- Housing is never priced in canon. Modelled from a Japanese city rent baseline.
- Both scaled by each region's real world basis. Kanto like Tokyo, Kalos like Paris, Sinnoh like Hokkaido.
- Johto sits on the 1.00 baseline. Olivine apartment near 55k a month, smallholding near 80k.

Directional estimates, internally consistent, every figure traced to a workbook cell.

Pets are matched to the life, not the breed

These are supernatural creatures. People keep the one that fits their trade and their home.

Port and ferry crews

Marill or Wingull. water sense, buoyancy, comfortable around docks and boats

Farmers and smallholders

Mareep or Miltank. wool and dairy that offset their own upkeep

Night watch and late traders

Hoothoot. nocturnal alertness and exact timekeeping

Remote and mountain homes

Growlithe. warmth and guarding in a cold, isolated place

Carers and physical workers

Galarian Ponyta. a calming, gently healing presence after hard days

Couriers and travellers

Pidgey line. reliable homing and message carrying over distance

Olivine shortlist for a first time owner. Marill for a port home, Sentret and Hoothoot for an apartment, Mareep that part pays its way in wool, Growlithe for warmth and guarding, Galarian Ponyta for its calming healing touch. Any one runs eighteen to thirty five thousand Pokedollars in year one.

Two tracks, one clear leader

Track A, general consumer

Ferry and tourism shop tops the standalone matrix. The dockside cafe scores just below, kept as a companion to the pet business for shared supply.

Track B, Pokemon related

Pet grooming and boarding leads everything, by a wider margin than any Track A option. The Day Care and Pokemon Center serve different customers, so this is close to white space.

Four region-plus-business packages

RECOMMENDED

Johto, Olivine City

Pet grooming and boarding, dockside cafe alongside. Underserved market, existing supply chain, near zero healthcare cost.

GROUND FLOOR

Paldea, Cortondo

The genuine runner up. Most open field of any region, at the cost of younger institutions.

LIFESTYLE

Alola, Konikoni City

Warmest culture on the list. Higher cost of living and a rare Ultra Wormhole tail risk.

COMFORT

Kanto, Cerulean City

Safe and familiar, but weakest on fit once culture is scored properly.

Where to invest once running

BCG Growth-Share Matrix, venture product lines

- Grooming and boarding is the Star. Keep investing.
- Retail feed and supplies is the Cash Cow. Steady, funds expansion.
- Pet transport is a Question Mark. Keep it a small pilot.
- Ansoff order. Penetrate Olivine first, then develop into Cianwood and Goldenrod.
- Structure stays flat. Owner plus one or two staff, hands on at the counter.

The downside is a bad year, not a lost business

Risk	Prob.	Impact	Mitigation
Ultra Wormhole incursion with regional spillover	Low	High	Site the business away from known Alola-adjacent shipping routes, hold Pokemon Center emergency contacts on file
Weather-legendary reawakening (Groudon and Kyogre style event)	Low	High	Not applicable to Johto directly, monitor Hoenn news for supply chain effects only
Team Rocket nostalgia relapse or copycat crime	Low	Low	Standard insurance, no special provision given ten year resolved status
Seasonal demand swing around Whirl Cup travel	Medium	Medium	Run the cafe as a counter-seasonal second revenue line to smooth quiet months
Feed supply shock on Route 39 farms	Low	Medium	Contract two farms rather than one, hold four weeks of dry feed buffer

RECOMMENDATION

Johto, Olivine City. Pet grooming and boarding, anchored by a dockside cafe.

Johto wins on safety, cost, and a warm rural culture that never turns into battle pressure. Olivine adds a real landmark, a calm port, and a fast train line to a bigger city. The business is built on a supply chain and a customer base that already exist in the source material, not invented to fit. Paldea and Alola are the honest alternatives. Kanto is the comfortable fallback.

Every figure is directional and traces to the accompanying workbook.
